

JAMES ABILONG

SOFTWARE DEVELOPER

CAREER OBJECTIVE

To leverage my expertise as a dynamic and analytical software developer in a challenging role where I can apply my 5 years of experience in software development, database management, and user interface optimization. I am committed to delivering high-quality solutions that enhance business operations, improve user experience, and meet client requirements precisely and efficiently. I seek opportunities to contribute to innovative projects while continuously expanding my technical expertise.

Bachelor in Computer Science
Cebu Institute of Technology 2015-2019

SKILLS AND EXPERTISE

- PHP, C#, JAVA
- HTML, CSS, SASS
- Git, SVN
- SQL (MS SQL, IBM Db2)
- React and NodeJS
- Knowledge Acquisition and Trainability
- Effective Communication
- Time Management

LANGUAGES

- English (Fluent)
- Filipino (Fluent)
- Japanese (N5 Level)

WORK EXPERIENCE

Forty Degrees Celsius Inc. (FDCI)
Web Developer
February 2024 - Present

• Lulu/Ciao- Live Streaming Application

I developed a customized variant of the MacheTalk live streaming application, building a responsive ReactJS frontend and implementing backend features to enhance functionality. I delivered intuitive UI components and full-stack improvements based on client requirements, ensuring a smooth and engaging user experience.

• MacheTalk - Live Streaming Application

Designed, developed, and optimized APIs to enhance system functionality and interoperability. Improved data exchange efficiency, reduced response times, and ensured seamless integration with third-party applications, resulting in enhanced performance and user experience.

Advanced World Solutions, Inc. (AWS PH)
Associate Research and Development Engineer
2019 - 2023

• Rental Application for Tenants and Owners

Designed, implemented, and tested screens for migrating an existing VBA-based application to a modern C# and .NET Core system, improving performance, maintainability, and user experience. Optimized code structure to enhance system efficiency and ensured seamless functionality through rigorous testing.

• Multi-functional Printer (Software)

Identified, debugged, and resolved critical software issues, improving system stability and performance (ReactJS). Analyzed deployed versions on both the emulator and hardware, optimizing functionality and reducing performance bottlenecks, which enhanced overall efficiency and user experience.

• Web Application for a Rental Company

Developed mock screens to streamline rental searches and listings, enhancing usability for both tenants and property owners.

• Banking Portfolio System Programming

Implemented and tested client-requested features, enhancing system functionality and user satisfaction (JAVA). Identified and resolved inherent system bugs, improving software reliability and reducing downtime.
